

Orion 9V 250mAh Ni-Mh Rechargeable Battery is the perfect choice for your everyday electronic devices. It is one of the most preferred batteries due to its quality and safe use. It has Ni-Mh and can be charged. Orion 9V 250mAh Ni-Mh Rechargeable Battery has 9 V voltage and 250mAh capacity.

Ni-Mh Rechargeable Batteries:

In today's technology, high capacity batteries are needed for many devices. Ni-Mh batteries contain much more capacity (current) than Ni-Cd batteries. Therefore, they are preferred for the long use of portable devices. When they are kept for a long time, there is a decrease in the current stored in them. For this reason, such batteries should be used immediately after being charged and should not be kept waiting. Their lifetime is similar to Ni-Cd batteries. When filled with normal charging time, it is an average of 5 years or between 500-1000 charges. Ni-Mh batteries are used alone or in groups such as Ni-Cd batteries in measurement devices and similar electronic devices used in the health sector. The grouped form of these batteries is also called a battery.

Brand	ORION
Model	6F22
Voltage	9V
Capacity	250mAh
Chemical System	Ni-Mh
