

## CD40106B CMOS Hex Schmitt-Trigger Inverters

### 1 Features

- Schmitt-Trigger Inputs
- Hysteresis Voltage (Typical):
  - 0.9 V at  $V_{DD} = 5$  V
  - 2.3 V at  $V_{DD} = 10$  V
  - 3.5 V at  $V_{DD} = 15$  V
- Noise Immunity Greater Than 50%
- No Limit On Input Rise and Fall Times
- Standardized, Symmetrical Output Characteristics
- For Quiescent Current at 20 V
- Maximum Input Current Of 1  $\mu$ A at 18 V Over Full Package Temperature Range:
  - 100 nA at 18 V and 25°C
- Low  $V_{DD}$  and  $V_{SS}$  Current During Slow Input Ramp
- 5-V, 10-V, and 15-V Parametric Ratings

### 2 Applications

- Wave and Pulse Shapers
- High-Noise-Environment Systems
- Monostable Multivibrators
- Astable Multivibrators

### 3 Description

The CD40106B device consists of six Schmitt-Trigger inputs. Each circuit functions as an inverter with Schmitt-Trigger input. The trigger switches at different points for positive- and negative-going signals. The difference between the positive-going voltage ( $V_P$ ) and the negative-going voltages ( $V_N$ ) is defined as hysteresis voltage ( $V_H$ ).

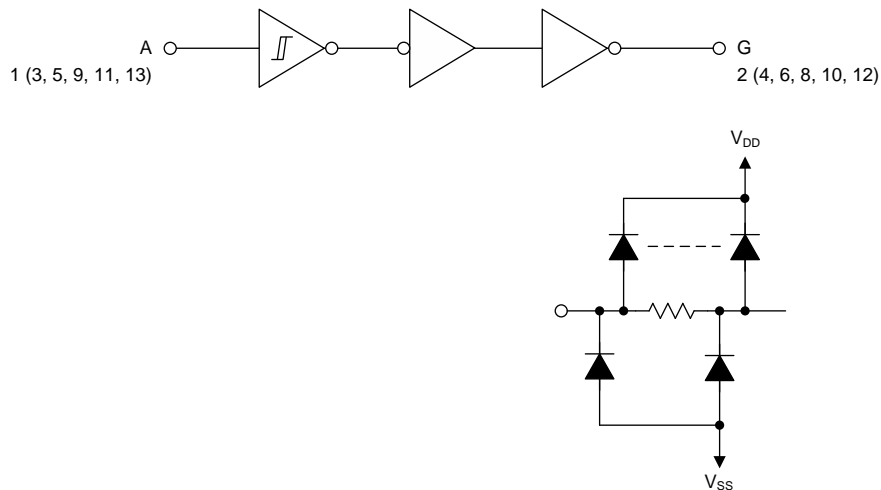

The CD40106B device is supplied in ceramic packaging (J) as well as standard packaging (D, N, NS, PW). All CD40106B devices are rated for  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  ambient temperature operation.

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

### Changes from Revision E (September 2016) to Revision F Page

- Changed incorrect pin descriptions to match package drawing ..... **3**

### Changes from Revision D (August 2003) to Revision E Page

- Added *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ..... **1**
- Added *Thermal Information* table ..... **4**

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
DC supply voltage, $V_{DD}$ <sup>(2)</sup>	−0.5	20	V
Input voltage, all inputs	−0.5	$V_{DD} + 0.5$	V
DC input current, any one input		±10	mA
Power dissipation, $P_D$	$T_A = -55^{\circ}\text{C}$ to $+100^{\circ}\text{C}$		500
	$T_A = 100^{\circ}\text{C}$ to $125^{\circ}\text{C}$ <sup>(3)</sup>		200
Device dissipation per output transistor		100	mW
Maximum junction temperature, $T_J$		150	$^{\circ}\text{C}$
Storage temperature, $T_{stg}$	−65	150	$^{\circ}\text{C}$

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Voltages referenced to  $V_{SS}$  terminal
- (3) Derate linearity at 12 mW/ $^{\circ}\text{C}$

### 6.2 ESD Ratings

	VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	2000
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

## 8 Detailed Description

### 8.1 Overview

The CD40106B device contains six independent inverters with schmitt trigger inputs.. They perform the Boolean function  $Y = \overline{A}$  in positive logic.

Schmitt-Trigger inputs are designed to provide a minimum separation between positive and negative switching thresholds. This allows for noisy or slow inputs that would cause problems such as oscillation or excessive current consumption.

### 8.3 Feature Description

The CD40106B has standardized symmetrical output characteristics and a wide operating voltage from 3 V to 18 V with quiescent current of 20  $\mu\text{A}$  tested at 20 V. These devices have transition times of  $t_{\text{TLH}} = t_{\text{THL}} = 50 \text{ ns}$  (typical) at 10 V. The operating temperature is from  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ . Schmitt trigger inputs on this device support slow or noisy input signals.

### 8.4 Device Functional Modes

Table 1 lists the functional modes of the CD40106B.

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The CD40106B device is a Schmitt-Trigger input device that can be used for a multitude of inverting buffer type functions. The application shown here takes advantage of the Schmitt-Trigger inputs to produce a square wave output from a sine wave input.

### 9.2 Typical Applications

#### 9.2.1 Wave Shaper

Copyright © 2017, Texas Instruments Incorporated

**Figure 17. Wave Shaper Schematic**

##### 9.2.1.1 Design Requirements

Take care to avoid bus contention, because it can drive currents that would exceed maximum limits. Parallel output drive can create fast edges into light loads so consider routing and load conditions to prevent ringing.

##### 9.2.1.2 Detailed Design Procedure

The recommended input conditions for [Figure 17](#) includes specified high and low levels (see  $V_P$  and  $V_N$  in [Electrical Characteristics: Static](#)). Inputs are not overvoltage tolerant and must be below  $V_{CC}$  level because of the presence of input clamp diodes to  $V_{CC}$ .

The recommended output condition for the CD40106B application includes specific load currents. Load currents must be limited so as to not exceed the total power (continuous current through  $V_{CC}$  or  $GND$ ) for the device. These limits are in the [Absolute Maximum Ratings](#). Outputs must not be pulled above  $V_{CC}$ .

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Recommended Operating Conditions](#). The  $V_{CC}$  terminal must have a good bypass capacitor to prevent power disturbance. A 0.1- $\mu$ F capacitor is recommended to be used on the  $V_{CC}$  terminal, and it must be placed as close as possible to the pin for best results.

## 11 Layout

### 11.1 Layout Guidelines

When using multiple bit logic devices, inputs must never float. In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only three of the four buffer gates are used. Such inputs must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally they are tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient. Floating outputs are generally acceptable, unless the part is a transceiver.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

---

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
